Experience

2021-???? The University of Texas

Austin, TX

PhD Student and Graduate Research Assistant | Supervisor: James Bornholt

Pondered the intersection of formal methods and computer systems. Organized the <u>PL-Systems</u> reading group and mentored undergrads attending the systems <u>directed reading program</u>. Contributed to the <u>SquirrelFS</u> Rust persistent memory filesystem.

2020-2020 Microsoft Research

New York, NY (remote)

Contract Software Developer

Contributed to *Shapeshifter* with the <u>Al for Systems</u> lab, which uses machine learning and dynamic analysis to optimize datastore index structure. Through careful design and profiling, reduced the critical-path policy engine's latency by nearly 40%. Built the interactive <u>visualizer and frontend</u> for MSR's <u>TechFest</u>. Mentored PhD interns on the project, one of whom reported, "[Shapeshifter] is the highest-quality research codebase I've ever seen". (I am inclined to agree!)

2018-2019 **Apple** Cupertino, CA

Systems Software Engineer

Brought the rainbow to you by bridging the gap between hardware and software, influencing performance improvements, power efficiency, security, and the programming ease of hitherto-unreleased Apple products.

2017-2018 **Fauna** San Francisco, CA

Senior Software Engineer

Developed Fauna's core product, its <u>globally consistent, transactional database</u>. Designed and implemented a distributed fault injection testbed to catch consistency volation bugs early. Mentored engineers new to Scala, JVM concurrency, and the strongly-typed functional programming style. Disseminated technical knowledge via the <u>official company blog</u>.

2014-2017 **Fastly** San Francisco, CA

Senior Software Engineer

Maintained Fastly's core product, an HTTP reverse proxy and cache during which network throughput increased sixfold to 4.5 million RPS. Extended Fastly's edge-compute programming language. Designed and led the implementation of a sandboxing dynamic analysis and system introspection runtime for the Fastly software stack, atop which the compiler, API, and security teams have built custom tooling. Represented Fastly externally by speaking at conferences.

2012-2014 **Twitter** San Francisco, CA

Software Engineer II

Extended Twitter's Ruby and Java runtimes on the <u>Runtime Systems org</u>, improving garbage collection, JIT compilation, and runtime tooling and infrastructure. Built an async, lock-free logging library to minimise tail latencies accrued during blocking GC logging calls. Collaborated with external teams to diagnose service-level performance issues; in one case, careful analysis increased single-node throughput by two orders of magnitude. Revamped legacy systems on the <u>Anti-Spam Engineering Team</u>, reducing end-to-end latency by an order of magnitude in a key service, and built new services for spam reporting and actioning.

Teaching Experience

For further details about my teaching experience and philosophy, please see my homepage.

2020-2021 MacEwan University

Edmonton, AB, Canada

Sessional Instructor

2020-2020 The University of Toronto

Sessional Instructor

Toronto, ON, Canada (remote)

Education

2009-2012 The University of British Columbia

Vancouver, BC, Canada

Msc, Computer Science | Supervisor: Andy Warfield

As a TA for UBC's brand-new <u>Scheme-based introductory CS course</u>, I was awarded a <u>TA award</u> by the University (a <u>gold star!</u>). As President of the <u>CS Grad Students' Association</u>, I liased between grad students and the department, led TA training sessions, organized <u>social activities</u>, and served on the <u>UBC Graduate Council</u>. Organized the <u>systems</u> and <u>security</u> reading seminars.

2005-2009 The University of Alberta

Edmonton, AB, Canada

Bsc, Computing Science

As a <u>Undergraduate Association of Computing Science</u> executive, I interfaced with groups outside the department and advocated for students' issues within. As a member of the U of A's <u>Cluster Challenge Team</u>, I configured, benchmarked, and tuned the GAMESS quantum chemistry package, and was the physical chemistry domain expert for the team. I also assisted with stereographic visualization of molecular data and general cluster system administration.

Publications and Presentations

07.2024 SquirrelFS: Using the Rust Compiler to Check Filesystem Crash Consistency OSDI '24 PDF Source	
04.2022 Proving the Coding Interview	<u>Dafny</u> tutorial series <u>Part 1</u> <u>Part 2</u> <u>Part 3</u>
01.2020 ELF off the Shelf	Guest lecture in MacEwan University's <u>OS class</u> <u>Slides</u>
11.2017 Cache Ruins Everything Around Me!	Guest lecture in Macewan University's <u>OS class</u> <u>Slides</u>
07.2017 Let's Build A HyperCard RPG!	Coding Livestream <u>Videos</u>
11.2016 Hands-on HTTP/2, a Fresh Start to The Web	QCon SF 2016 <u>Event Page</u>
06.2016 Beyond Breakpoints: A Tour Of Dynamic Analysis	QCon NYC 2016 <u>Video</u> <u>Materials</u>
12.2015 Two Approaches towards OS Scalability	Papers We Love SF 12/2015 <u>Video</u> <u>Event Page</u>
09.2015 Racing to Win: Correct Concurrency with Race Condition	Surge 2015 Video Materials
04.2015 Your Computer Is Already A Distributed	Papers We Love SF 04/2015 <u>Video</u> <u>Event Page</u>
System; Why Isn't Your OS?	
06.2014 Your Heap And You: Garbage Collector Tuning for Twitter Services	
05.2013 Cachekata: Memory Hierarchy Optimization via	Msc. Thesis PDF
Dynamic Binary Translation	
04.2013 Whose Cacheline is it Anyway: Operating System Suppo	rt for Eurosys '13 PDF
Live Detection & Repair of False Sharing	
03.2012 Debugging Through Time with the Tralfamadore Debugg	ger RESolVE '12 PDF
08.2011 Herbert West: Deanonymizer	HotSec'11
10.2010 Iodine: Interactive Program Partitioning	OSDI '10 Poster Session PDF
